Let's discuss with the whole group.

Julie,
Locking fields is huge improvements so we don't accidentally corrupt the spreadsheet. However, I have concerns if we can't guarantee chemists are using the validated spreadsheet. A reviewer would have to either enter the data manually or copy the data to his/her own spreadsheet (if access to the original file was possible) in order to check the validity of the estimated net weight and sampling number.

Peter,
This is not a program; it's a spreadsheet. Once it is validated we can lock the fields with the formulas, so that they cannot be inadvertently changed. We will verify the calculations annually.

Following up on some of the meeting topics, I would like to clarify a few points of concern regarding the statistical program.

1. Validating the statistical program for accuracy.
2. Making sure certain fields can not be manipulated once the program performs a calculation. Currently, just about any relevant field can be altered after the program performs its calculations.
For example, net weight, standard deviation, and the estimated minimum/maximum net weight range can be altered.
3. Administrative privileges- I think only Kip or IT should have the programs password and ability to alter the program.
